

Investigating the population dynamics of the American Oystercatcher on the islands of Massachusetts

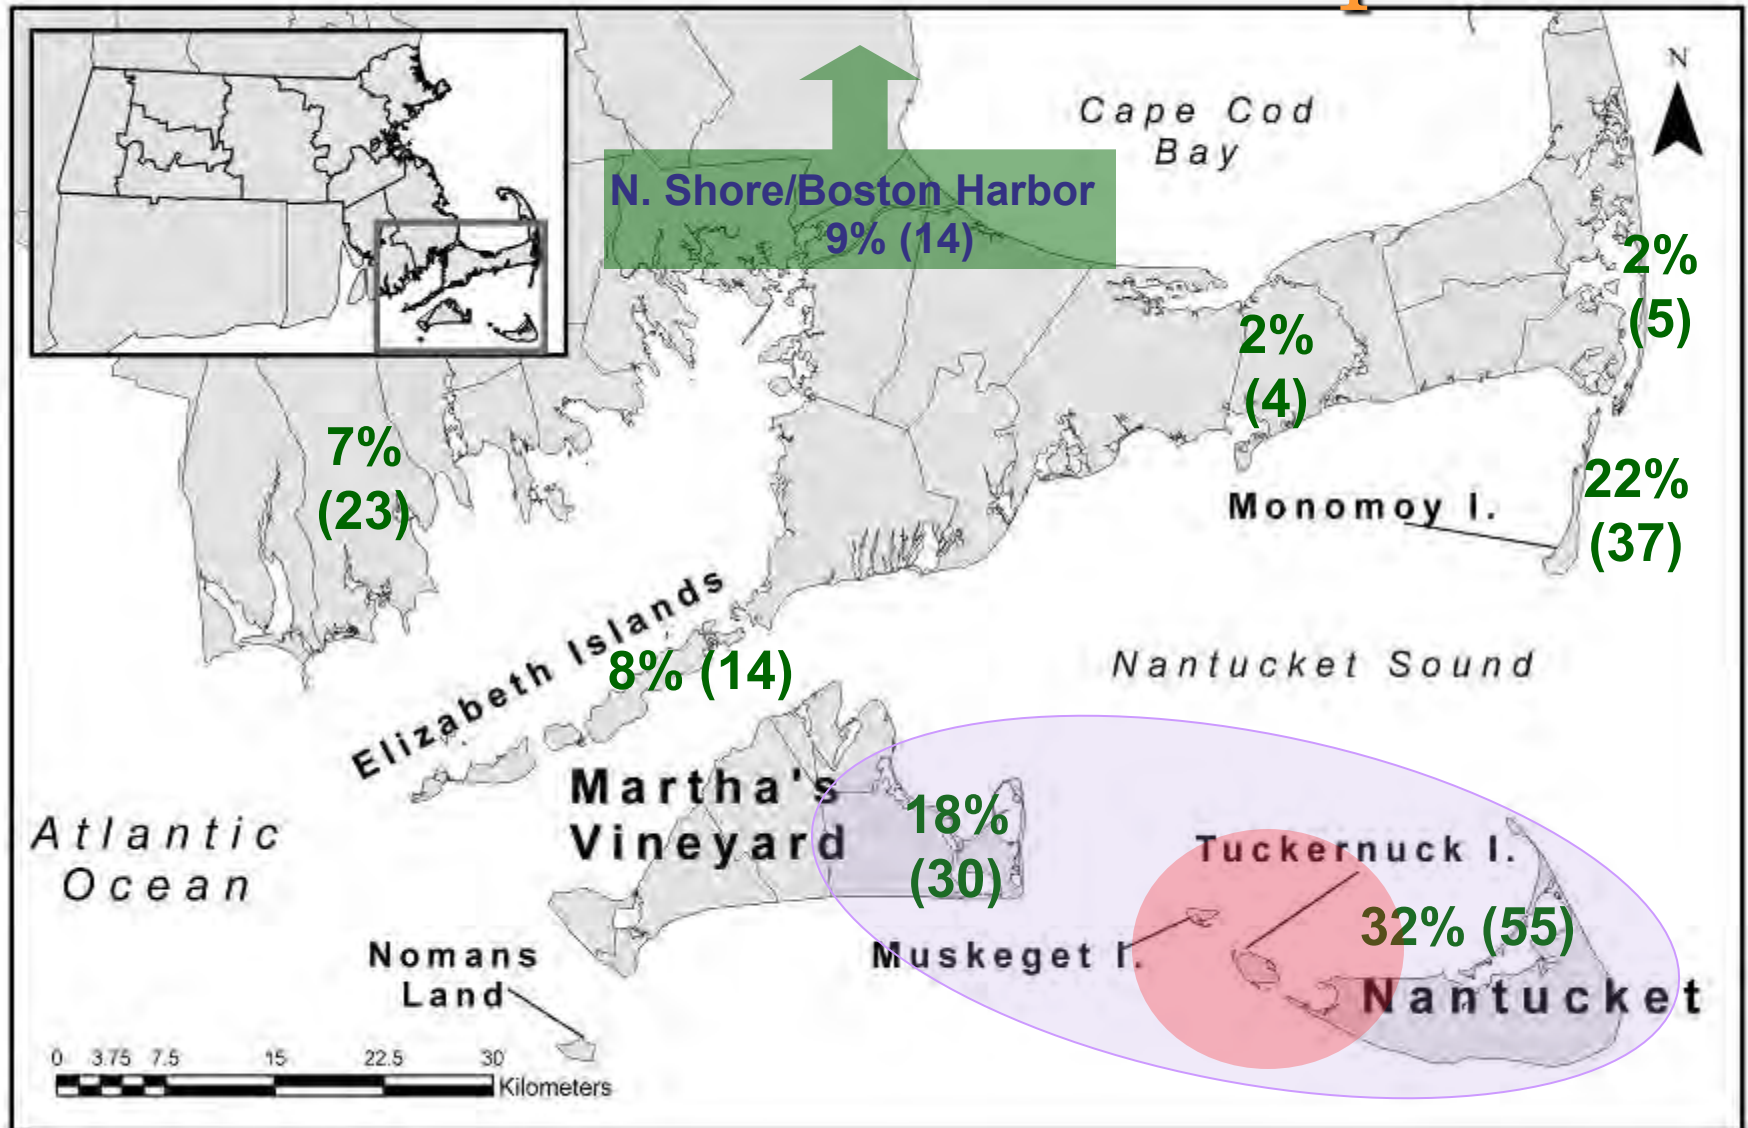

Sean Murphy, City University of New York

Objectives

1. **Color banding:** Current status in Nantucket County, Massachusetts
2. **Population model:** Investigate and predict local population dynamics
3. **Molecular techniques:** Introduce the utility of microsatellites to investigate population dynamics

2006 state total = 180 pairs

Off-shore wind farm

Convergence on Monomoy?

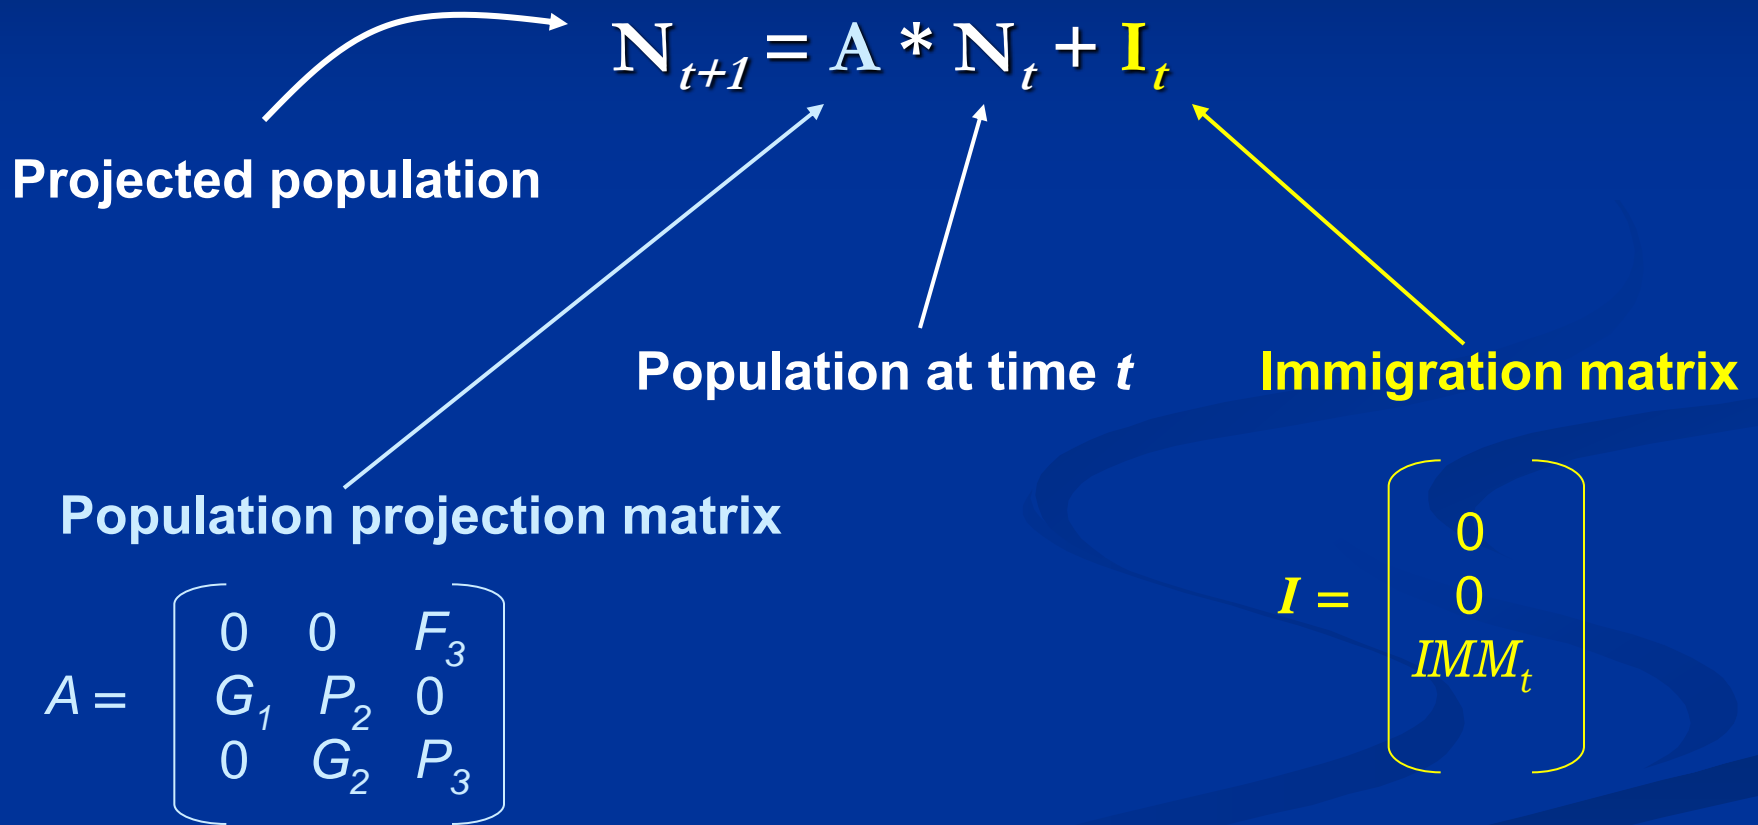

Color-banding conclusions

- Oystercatchers breeding in Nantucket Co. are dispersing north to Monomoy Island
- Preliminary results hint at a large wintering distribution

Project objectives

1. Color banding: Current status of color banding in Nantucket County, Massachusetts
2. Population Model: Investigate and predict local population dynamics
3. Molecular techniques: Introduce the utility of microsatellites to further investigate population dynamics of oystercatchers

Leslie matrix population model

Life-cycle and matrices

Lifespan:

Juvenile.....Subadult.....Adult

$$A = \begin{bmatrix} 0 & 0 & F_3 \\ G_1 & P_2 & 0 \\ 0 & G_2 & P_3 \end{bmatrix}$$

$$I = \begin{bmatrix} 0 \\ 0 \\ IMM_t \end{bmatrix}$$

$$N_{t+1} = A * N_t + I_t$$

Parameter values

Stage	Class	Demographic parameters	Surv _{<i>i</i>}	Fecundity _{<i>i</i>}
1	Juvenile	s_1	0.950	0
2	Subadult	p_2	0.751	0
2	Subadult	s_2	0.199	0
3+	Adult	p_3	0.950	0.3272 <i>SD</i> ± 0.149
rr	Return rates	rr _{EUOY} = 0.89 (Durrell et al. 2000)	-	-
IMM _{<i>t</i>}	Immigration	Adult females per breeding season	-	-

Breeding
pairs

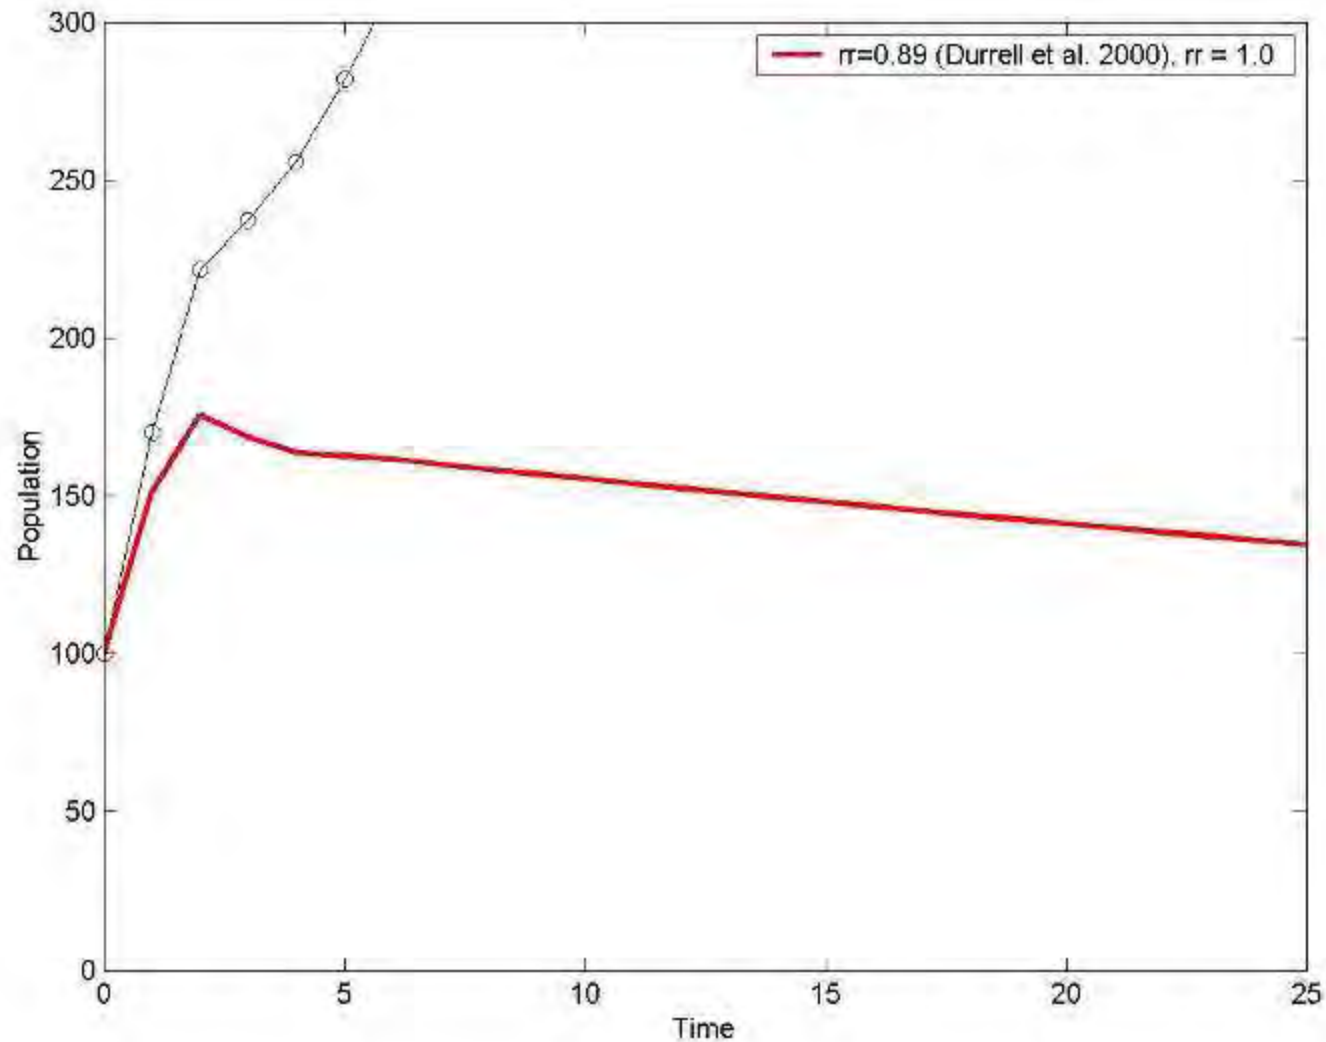

Annual
productivity

Elasticity analysis

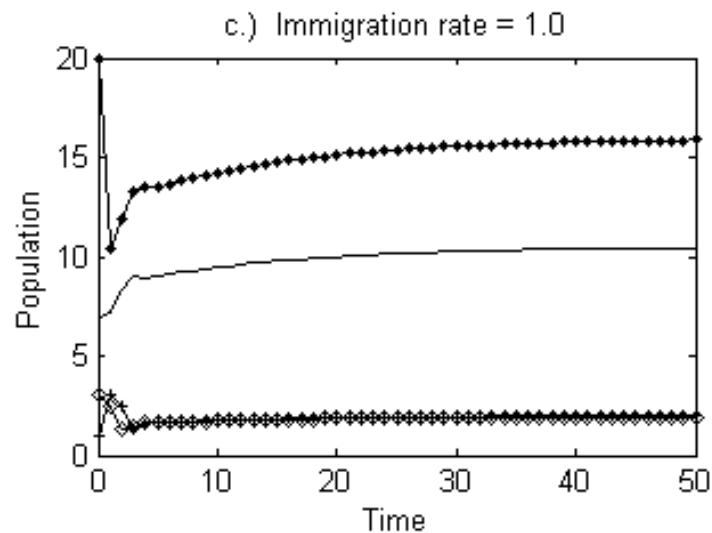

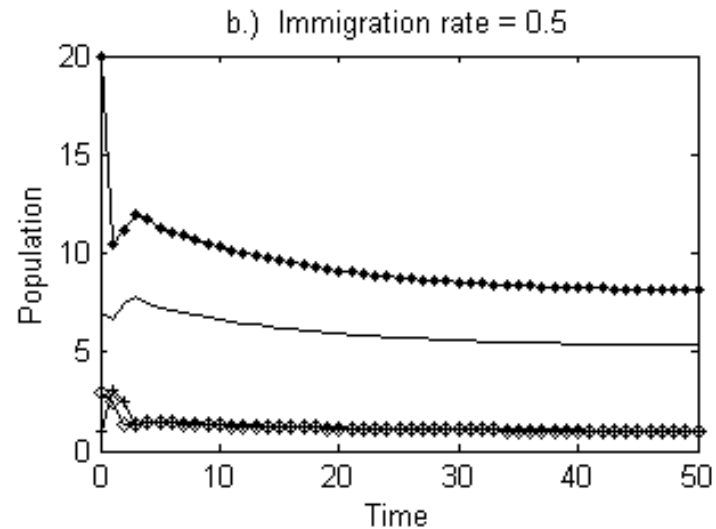

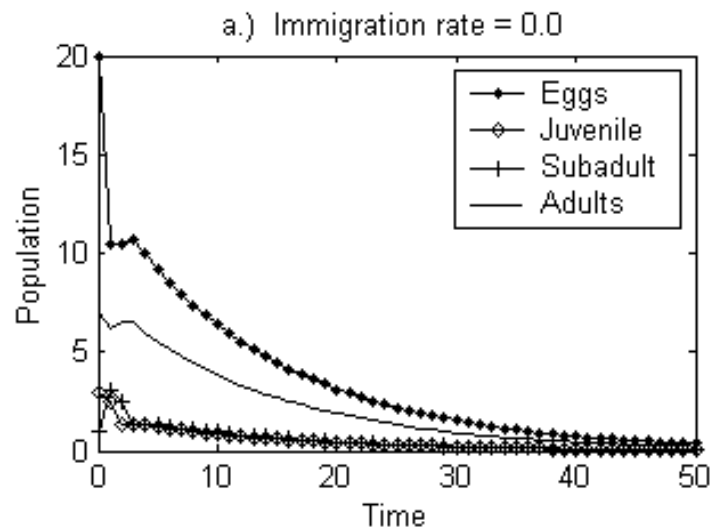

Elasticity of adult survival, $E_{33} = 0.603$

Class name	Class in year t+1	Class in year t			
		1	2	3	
Juvenile	1	0.1015	0	0.092	
Subadult	2	0	0.1015	0	
Adult	3	0	0	0.6034	

Population trajectory

Immigration

Summary

According to this model ...

- Changes to adult survival (P_3) has the largest impact on the trajectory of the local population.
- The inclusion of immigration predicts a growing *local* population

Photo by Giff

Conclusions: source vs. sink

Sink population – mortality exceeds local recruitment

- Annual productivity

Source population – productivity exceeds mortality

- Nantucket – 38 breeding pairs in 2006
- ???

Conclusions: management tool

*As more demographic data
continues to be collected,*

Inclusion of an immigration matrix
may be vital in understanding
populations dynamics located
in the migratory region

Project objectives

1. Color banding: Current status in Nantucket County, Massachusetts
2. Population model: Investigate and predict local population dynamics
3. **Molecular techniques**: Introduce the utility of microsatellites to investigate population dynamics

Taberlet and Bouvet (1991): population sampling

Collection:

- 4-5 breast feathers
- Placed in paper envelope, stored in dry place
- Long-term storage: -80°C

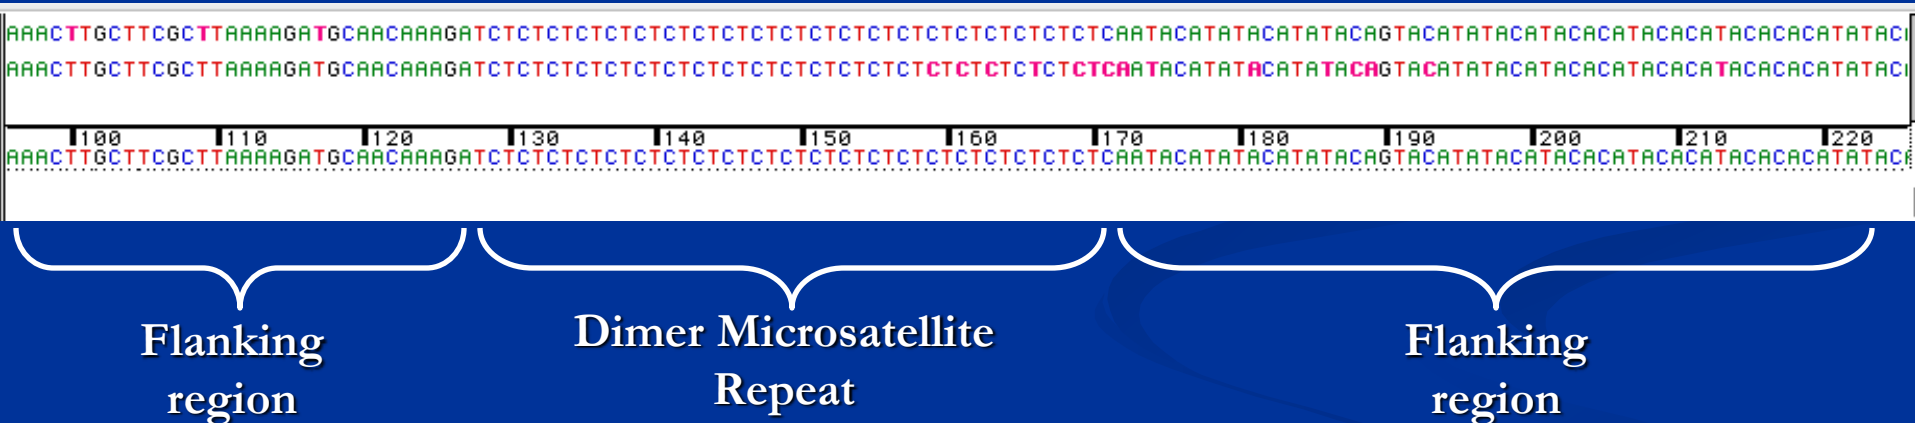

Preparation:

- Cut at base of rachis
- *Extraction*: standard chloroform techniques (Sambrook et al. (1989))

Microsatellites

- Polymorphic loci of repeating nuclear DNA
- Flanked by a 30-50 base pair stretch allowing for the development of primers

- Polymorphic and hypervariable \rightarrow fine scale studies:
 - population history / bottleneck detection / gene flow

Haematopus ostralegus

- ‘Residents’ and ‘leapfrogs’ of Schiermonnikoog (Ens et al. 1992)

- Genetic difference between two social groups?

From Ens et al. 1992

- Developed 8 variable microsatellite loci for *H. ostralegus* were developed for ostralegus by Van Treuren et al. (1999)
- High levels of gene flow → juvenile dispersal

American Oystercatcher

Molecular analysis of AMOY could facilitate the following:

- Founder events (COLONISE)
- Bottleneck effect
- Genetic difference across geographic large- and fine-scale
- Variation in gene flow
 - Migration enhances gene flow
 - Gene flow drops with an increase in distance
- N_e , historic λ (BATWING)

Northern Expansion ca. 1940-1970

Florida-Virginia
population

Founder events

Arguedas & Parker 2000

Volunteers
wanted

More feathers, from more
areas throughout the
range

0 185,000 370,000 740,000 Meters
